

Philips Ultrasound EPIQ and Affiniti Analysis Setups

Our goal at Philips Healthcare is to provide the clinical education you need to make the most of your equipment investment. Virtual instructor-led training (VILT) events use a robust online classroom platform that is specifically designed for highly-interactive, live online learning.

Philips ultrasound general imaging 104VILT

About virtual instructor-led training

Virtual training is a facilitator-led, live online learning event that is delivered in a virtual environment. Participants can be geographically dispersed and also individually connected. Each learner uses their own computer or other compatible device. Virtual training is synchronous, meaning that participants are connected at the same time as the

facilitator. Philips virtual training events typically range from 60–120 minutes in length with a maximum of 40 participants. This socially engaging, purposefully-designed training allows participants the same quality education of an instructor-led classroom without the need or expense of traveling.

Philips Ultrasound EPIQ and Affiniti Analysis Setups (GI104VILT)

Course description

This one hour Virtual Instructor Led Training (vILT) course is designed to provide customers knowledge for customizing analysis packages on their EPIQ or Affiniti ultrasound system. The course topics will include analysis options available in the system set-ups menu, the analysis applications that are available, customizing the tools and results menu, customizing the calc list menu, touchscreen menus, creating new measurements and calculations, auto freeze and reports. This course is intended for sonographers and system super-users who require additional knowledge of system customization of analysis packages.

Course objectives

Upon completion of this course, the learner should be able to:

- · Identify analysis setup menus
- · Describe the analysis applications available
- · Relate analysis measurements and calculations

Prerequisite

A thorough knowledge and understanding of system instrumentation is required for this program.

Audience statement

This course is intended for sonographers and system super-users who require additional knowledge of system customization of analysis.
