Clinical Education

Philips Ultrasound Volume Imaging: Advanced Technologies

Our goal at Philips Healthcare is to provide the clinical education you need to make the most of your equipment investment. Virtual instructor-led training (vILT) events use a robust online classroom platform that is specifically designed for highly-interactive, live online learning.

Philips ultrasound general imaging 204VILT

About virtual instructor-led training

Virtual training is a facilitator-led, live online learning event that is delivered in a virtual environment. Participants can be geographically dispersed and also individually connected. Each learner uses their own computer or other compatible device. Virtual training is synchronous, meaning that participants are connected at the same time as the

facilitator. Philips virtual training events typically range from 60-120 minutes in length with a maximum of 40 participants. This socially engaging, purposefully-designed training allows participants the same quality education of an instructor-led classroom without the need or expense of traveling.

Philips Ultrasound Volume Imaging: Advanced Technologies (GI204VILT)

Course description

This 1- hour Virtual Instructor Led Training (vILT) course is designed to describe, define and identify the benefits of the advanced technologies used in Philips ultrasound volume imaging. The advanced technologies that will be covered in this course are aReveal, TrueVue, GlassVue, FlexVue, MPR Touch and TouchVue.

Course objectives

Upon completion of this course, the learner should be able to:

- Demonstrate how to use Philips Volume Imaging technologies to include aReveal, TrueVue, GlassVue FlexVue, MPR Touch and TouchVue
- Explain what these technologies do
- Explain the clinical benefits of using these technologies
- Discuss benefits of improved workflow and efficiency

Prerequisite

Advanced knowledge and understanding of volume imaging principles and tools is recommended for this course.

Audience statement

This course is intended for sonographers as well as physicians who require additional knowledge of the Philips ultrasound volume imaging advanced technologies.
